

RRU-MOUNTS

Remote Radio Mount Kits

CommScope offers a full line of RRH/RRU mounts which are designed to securely support radios and help prevent outdoor elements from affecting equipment performance. The RRU brackets mount securely to a wide range of round or angled members to enable mounting to the tower sector frame along with options that attach directly to the tower.

Our popular RR-FA2 Fast Access RRU Mount features an innovative design with removable radio brackets for ease of installation. Removable brackets on the RR-FA2 allow mounting of the brackets to the radio and mounting/adjustment of the base clamp to the tower or antenna mount separately. The RRU with brackets can then be inserted into the installed base clamps for a quick and simple install – plus easy access for radio maintenance later.
